

Lorebook or Script in JanitorAI is a powerful tool to expand your world, characters and more than that.

Now, imagine you've made a wonderful, special cup of coffee and want to share the secret. Before sharing it with anyone, you must document the guide or recipe, that document is your Lorebook/Script.

So, what a Lorebook/Script **can do**?

1. Expand your world, specially if your book is the fiction one.
2. Expand your side characters, events, monsters or whatever like that.
3. Control and trigger memory that you want your bot to remember
4. Guides reaction about event, character, or something.
5. Trigger Event (testing)

English not my first language so sometimes, there will be typo or sound like AI, please forgive me.

If you see any mistakes, feel free to inform me u/peipei1998 (reddit), I'll fix it as soon as possible.

Lorebook Basic Visual Guide

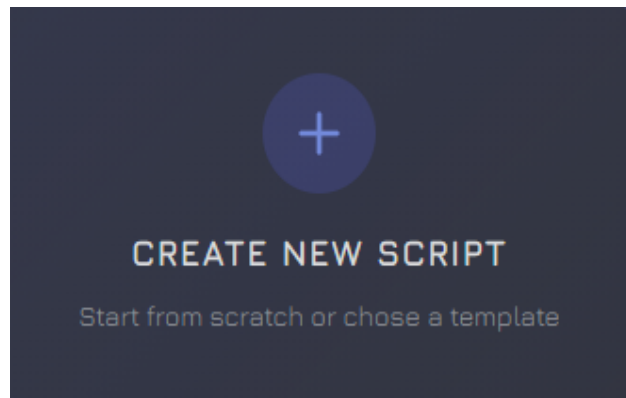

Where is Lorebook/Script?

1. Until now, only creators can add Lorebook/Script to the bots.
2. How to access to make Lorebook/Script?

Choose “Script beta”

Choose “+”

Enter “Script name”, choose “Lorebook”

A screenshot of the script creation form. At the top, there is a 'SCRIPT NAME' field with a red asterisk and a placeholder text 'Enter a name for your script'. Below this is a 'SCRIPT TYPE' section with two options: 'Lorebook' (with a book icon and the description 'Create entries to build your universe') and 'Advanced' (with a code icon and the description 'Write custom JavaScript code for full control'). The 'Lorebook' option is highlighted with a blue border.

Click “Create Script” after you done.

DESCRIPTION [optional]

Describe what this script does...

0/500

Settings

MESSAGE DEPTH • ?

3

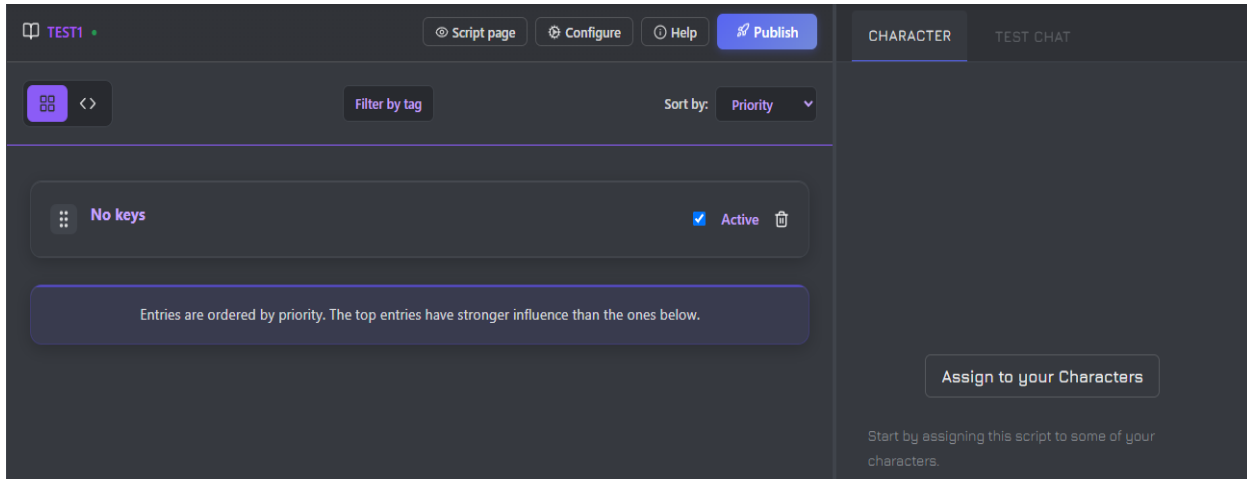

Cancel Create Script

MESSAGE DEPTH: How many messages will be available (How many messages the script will add information after triggered.)

What inside Lorebook/Script?

Everything about making the lorebook will be in “How to make Lorebook/Script”

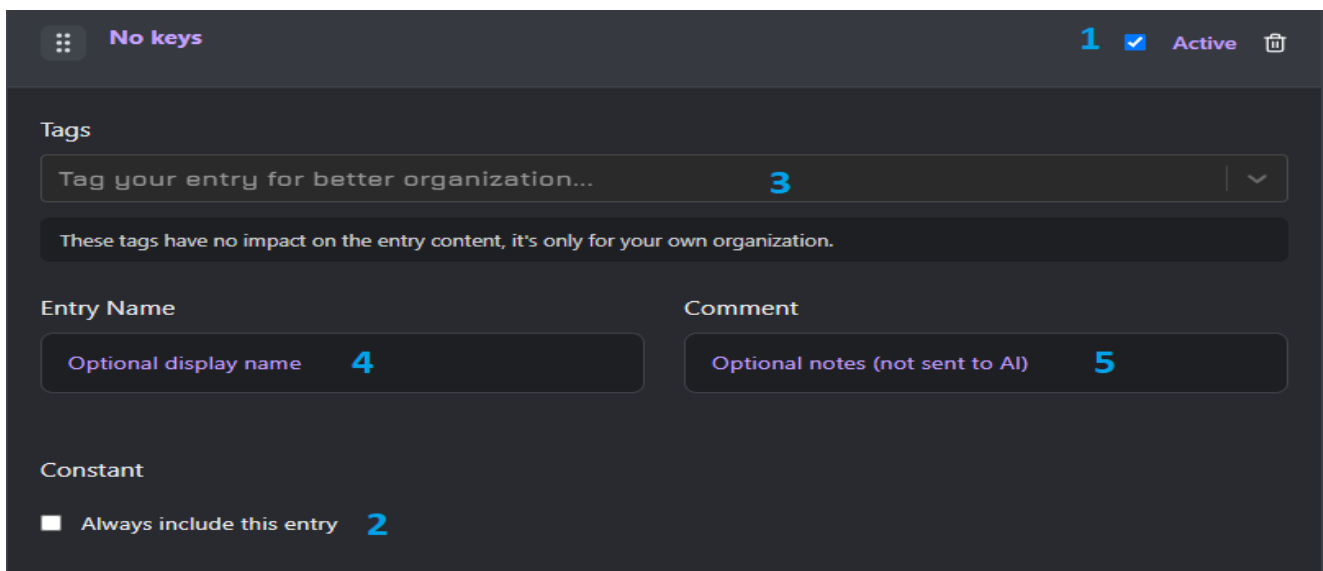

A. This is what you will see after click “Create script”.

1. Assign to your Characters : Click on it to choose the characters that you want to add the lorebook
2. After done with the Lorebook, choose the characters and **press PUBLISH** (This button **also use as Save**), and no, your lorebook/script is **safe from being published**, which **only can be changed in CONFIGURE's Visibility**)

2.

B. Click “No keys” and you will see this:

1: On/off button of this Lorebook's entry

2. **IMPORTANT:** Do not check the 'Always include this entry' option unless you require this information to be visible to the bot **in every single turn of the conversation**. Lorebook is **designed to save space**: entries will always be added to the chat **AS LONG AS** their keywords or conditions are triggered. **Overusing 'Always Include' will hurt your bot's memory for things that matter.**

3+4+5: Only need to organize your entries.

C. Drag down.

Case Sensitive **2** Match Whole Words **3** **1:**

☐ Keys must match case (Example ≠ example) ☒ Match complete words only (king ≠ liking)

Ignored on RegEx keys Ignored on RegEx keys

Keys *

Enter keys separated by commas **1**

Where you put your keywords/trigger words for the entry. You **MUST** put at least one word in this field, even if the entry is set to be **Always Active** (Force Inclusion). If you leave it blank, you will receive an error when you try to save or publish the entry. (Format for keyword: A, B, C, D...ect.

⊘ **Critical Rule: DO NOT use periods (.)** or other punctuation within the keywords themselves, as this can break the triggering system. (**NO ONE want entry will be trigged everytime you send “. “)**

2 + 3: There are already the example on the picture.

Case Sensitive: bless ≠ Bless (name)

Match Whole Words: king ≠ liking ≠ Viking

D.

The screenshot shows a configuration interface for a Lorebook. It has a dark theme. At the top left, under the heading "Secondary Keys", there is a dropdown menu (1) currently set to "AND ANY". Below it is a text input field (2) labeled "Secondary keys (comma-separated)". In the center is a large text area (3) with the placeholder text "Enter the lore content that will be added to the character's context". At the bottom left, under the heading "Depth", there is a dropdown menu (4) currently set to "3 (lorebook default)".

1+2. Secondary Keys : Mostly won't need for a very basic Lorebook but can be useful for the complex one.

AND ANY	The Entry will activate if at least one of these keywords is present in user's reply.
AND ALL	All keywords listed here must be present together in user's reply
NOT ANY	If any keyword in this list appears in the reply, the entry will be blocked from activating , even if the main keyword is present.
NOT ALL	The entry will only be blocked if all keywords in this list appear together. If only one or some of the words appear, the entry can still be activated.

3. **The content of Lorebook aka entry**, where you put the information of side character, event, or something about the world setting...ect.

4. The same as Message Depth.

E.

The image shows a dark-themed configuration interface. The top section is titled "ACTIVATION CONDITIONS:" and has two radio buttons: "Standard" (selected) and "Advanced (Script)". To the right of these is a blue number "1". Below this, there are two input fields. The first is labeled "Min Messages" and contains the value "0" with a blue number "2" next to it; below it is a tooltip that says "Activate after this many messages". The second is labeled "Probability" and contains the value "100" with a blue number "3" next to it; below it is a tooltip that says "Chance of activation % (0-100)". A horizontal line separates this from the bottom section, which is titled "INCLUSION GROUPS:". It also has two input fields. The first is labeled "Group Label(s)" and contains the text "e.g., combat, social (comma-separated)" with a blue number "4" next to it; below it is a tooltip that says "Only one entry from each group will be activated". The second is labeled "Group Weight" and contains the value "100" with a blue number "5" next to it; below it is a tooltip that says "Weight for random selection within group".

1. Don't touch it.

2. Min Messages: Active the script after how many messages.

3. Probability: The % the Entry will be triggered, default is 100%

4. Group Label: Label the entry.

Example: Everything about side character A can be labeled to the same label "Character A".

Only one entry from each group will be activated.

5. Group weight: Default is 100%, If **more than one Entry** in the same group is activated, the system uses the "Group Weight" values to perform a **weighted random selection** to choose the single "winner" and will be triggered.

6. Group Selection Mode (not on picture): Use insertion order instead of weight, first come first served.

7. Key Match Priority: Prioritize by number of matched keys, the more keywords in the reply match, the higher chance it will be triggered.

How to make Lorebook/Script?

Here we will learn about making an entry of Lorebook/Script

Tips

1. Don't need to add “ . “ in the keyword.
2. Don't put the same keyword in the different entries of THE SAME CHARACTER
3. You can add multiple Lorebook/Script into the same character.
4. Lorebook/Script $\neq$ Advanced Script
5. **Don't use ALWAYS INCLUDE THIS ENTRY**, you don't need it in most case, your entry will always be added into the chat AS LONG AS the keywords and conditions were triggered
6. Keep each entry's tokens at bay, you **DON'T NEED** to write a 10k tokens essay for a single entry.
7. Try to keep each entry's token **maximum 500 tokens**, for my opinions, total tokens of Lorebook/Script can be large as long as you did each entry well and added a good keyword (not overlap)

Now, it's time for lesson ~

BASIC FOR DUMMIES

Why **ALWAYS INCLUDE THIS ENTRY** is **HARMFUL**?

First, it's not necessary to always include this entry. When you click it, the entry will ALWAYS include in EVERY MESSAGE the user send to AI. It will cause:

1. Tokens wasted
2. The AI become delulu faster
3. Reply slower
4. More errors because of overload.
5. If the user pay per tokens, it's even worse → pay more.

So, **when you can use ALWAYS INCLUDE THIS ENTRY?**

1. Overall summary setting of the world
2. NPC lists

And done, leave it, stay away from that button!!!!

Now, let's sit down and start the lessons.

1. What is the most basic way to make an entry of lorebook?

The simplest and most basic way to make an entry of lorebook is “**Send/write X then Y**”, which mean **when you send a keyword to the AI, the entry will be triggered**.

Example:

Lucy is Max's girlfriend, she likes apple, banana, but she hates durian.

Keywords: Lucy, girlfriend, apple, durian.

{{user}}: Who is Lucy? (Lucy is keyword → entry was triggered on bot's reply)

{{char}}: Oh, she is Max's girlfriend, don't gift her durian, she hates it.

2. Ok, then what's the use of Secondary Keywords?

See them as a lock for your entry.

Here I have a content: Lucy is Max's girlfriend. She loves **apple** and **banana**, but she intensely **hates durian**. She finds the smell unbearable to her.

Main Keyword: Lucy

AND ANY	Secondary keys: apple, banana {{user}}: Who is Lucy? → Lucy is a main keyword but no secondary keys were included, entry won't be triggered. {{user}}: Who is Lucy, the girl eating an apple? → Lucy is a main keyword, "apple" is keyword of AND ANY and was included, entry will be triggered.
AND ALL	Secondary keys: Max, apple. {{user}}: {{user}} sees Lucy is sitting next to Max and eating an apple. → Lucy is a main keyword, "Max" and "apple" are included, entry will be triggered.
NOT ANY	Secondary keys: orange, grape, pear {{user}}: "Oh, Lucy is buying orange juice with Max." → Lucy is a main keyword, "orange" is key of NOT ALL ⇒ No entry will be triggered
NOT ALL	Secondary keys: fruit, market A. {{user}}: "Lucy is buying fruit in the market." → Lucy is a main keyword, "fruit" and "market" are keys of NOT ALL ⇒ Entry won't be triggered. B. {{user}}: "Lucy is buying fruit with me." → Lucy is a main keyword, "fruit" is keys of NOT ALL but "market" not included ⇒ Entry will be triggered.

3. What's Probability?

This is the chance that the entry will be triggered.

Example: Lucy is Max's girlfriend.

Main keyword: **Lucy**

Probability: 50% (Default: 100%)

{{user}}: “Who is Lucy?”

→ **Lucy** is the keyword, but the **Probability is 50**, which mean you **only have 50%** chance the entry will be triggered.

4. What is the meaning of Min Messages?

This will control after how many messages the entry will become active.

Example: Example: Lucy is Max’s girlfriend.

Main keyword: Lucy

Min messages: **10** (Default: 0)

{{user}}: “Who is Lucy?” (**first message from user**)

→ **Lucy** is the keyword, but the Min messages is **10**, which mean the entry **won’t be** triggered

But IF:

{{user}}: “Who is Lucy?” (**20th messages from user**)

→ **Lucy** is the keyword, the Min messages is **10**, now the message is the **20th** ⇒ entry **will be** triggered

ADVANCED FOR DUMMIES

No, this isn't Advanced Script

Just a slightly advance way (I think) to make Lorebook/Script

1. What is Inclusion Groups? I don't understand!!

It's group, where you will group the entries that have the same meaning/information:

Example, I have those entries:

A: Lucy's office is in a skyscraper. She is sitting by the window with her laptop and a coffee on her table. (**keywords: Lucy, office, working**)

B. Lucy's home is an apartment, cozy and full of books. (**keywords: Lucy, home, apartment**)

C. Lucy also go to gym and exercise. (**keywords: Lucy, gym, exercise**)

All those entries will be labeled as **Lucy_Location**. Because they're all **about Lucy and the places connect with Lucy**

{{user}}: **Lucy** is **exercise** at the **gym**, but she needs to return a call to her **office**.

→ “**Lucy**”, “**exercise**”, “**gym**”, “**office**” are keywords of A, B and C, but they're in the same group (Lucy_Location), **only one will be** triggered.

And this is when **Group Weight** join the party.

2. What is Group Weight?

Think this: Inclusion Groups is a group of friends fighting and trying to take your attention, then Group Weight is the man control your crazy friends, his rule is simple: **Let's the luck decide everything**.

Each entry will have its separate group weight.

Example:

A: Lucy's office is in a skyscraper. She is sitting by the window with her laptop and a

coffee on her table. (**keywords: Lucy, office, work**) (**Group weight: 20**)

B. Lucy's home is an apartment, cozy and full of books. (**keywords: Lucy, home, apartment**) (**Group weight: 30**)

C. Lucy also go to gym and exercise. (**keywords: Lucy, gym, exercise**) (**Group weight: 50**)

All those entries will be labeled as Lucy_Location.

{{user}}: Lucy is exercise at the gym, but she needs to return a call to her office

→ Group Weight begins working, A has 20%, B is 30% and C is 50%, which mean you will have 50% entry C will be triggered while A is 20% and B is 30%

Group Selection Mode: Group Weight will ignore the % and will decide with order instead (you and press and grab the entry to move its order/position)

Key Match Priority: Group Weight will ignore the % and will decide with how many keywords were matched.

With the example about Lucy_Location, we'll have: “**Lucy**”, “**exercise**”, “**gym**”, “**office**” are keywords of A, B and C but C has **3 keywords**: “**Lucy**”, “**exercise**”, “**gym**”

→ **C will be triggered**

WHAT A LOREBOOK/SCRIPT CAN DO?

Oh! It's a lot

For a single bot, can be used to **construct your world and add spice to it.**

Do you want a New York City setting but full of Vampires, Witches, and whatever else you can imagine? A **basic Scenario** can achieve that.

But **if you want:**

A New York City full of Vampires, Witches, and more, **PLUS** the A Family is a rival to the B Family, and the lady of the A Family has fallen in love with the boss of the B Family.

- **Or** the C's family ex-wife used to be B's family Elder's twice-removed cousin's lover's wife?
- **Or** your world has several kingdoms/cities, each one has a different of culture, pros & cons?
- **Or** you have **NPC R** is a very cool girl/guy, that also main character in another bot? You **can add her/his full information in the lorebook**, trigger with keywords, and it **will add the depth into how NPC will act and talk in each situation** (No more cold dd boss become affection and kind in the other bots).

Yeah, that is when Lorebook/Script steps into the play.

Besides, did you know you can use Lorebook to make a simple random event? (still testing, some models work, some not.)

OOC command about event + Probability = Random events

So, **these are what lorebook can do** (except what I said before):

1. Adding depth into your world
2. Adding depth into NPCs, make them more lively.
3. Help AI understand your fictional world or not popular world.
4. Adding NPCs into the chat (make a simple NPC list with few information)
5. Random events.
6. Keeps tokens count at bay for heavy lore's bot.
